Professional Headline

Helping organisations navigate changes by connecting business strategy, Enterprise Architecture, governance, delivery and AI into lasting organisational capability.

Executive Summary

I'm an Enterprise Architect and technology leader with over four decades of experience across enterprise systems, integration, governance, transformation, delivery, and AI operationalisation. My career has evolved across global organisations including WPP Media, BBC Studios, and British American Tobacco,, working in local, regional, and global roles. Specialising in aligning strategy, capabilities with scalable architecture roadmaps, operating model evolution, governance, and innovation. For the last and 3+ years specialising in enterprise AI operationalisation, agentic AI platforms, and Generative AI governance frameworks across organisations partnering with Business, Product, and Engineering to drive technical excellence, and enable high-value AI solutions.

Enterprise Architecture, AI Operationalisation, Transformation Leadership

- **Target Architecture Definition:** Defined target architectures and multi-year roadmaps across digital, commercial, and financial domains.
- **Executive Advisory:** Trusted advisor to CxOs, and enterprise steering committees on architecture, vendor selection, and strategic technology roadmaps.
- **EA Operating Model Redesign:** Transformed fragmented architecture functions into agile, strategy-aligned design authority engines using LeanIX and TOGAF 9.
- **GenAI & Agentic Governance Frameworks:** Designed and deployed AI capability models, safety guardrails, and compliance oversight for production adoption.
- **Legacy Modernization & Cloud Alignment:** Led multi-year migration initiatives transitioning monolithic legacy systems to event-driven architectures and modern cloud platforms.

Personal Lab Experiments

A repeatable system to discover, validate, and ship real products. This is a disciplined idea-to-production engine focused on solving real problems, shipping to production, and learning fast.

CAS (Continuous Architecture System / Architecture-as-Code)

- **Overview:** Exploration of how architecture can evolve from static documentation into continuously validated operational systems combining governance, operational intelligence, and AI native delivery workflows.
- **Architecture:** Model-agnostic, Agent runtime using structured tool interfaces, state machine orchestration, context injection, real-time trace logging. Built using Python, SKILLS + Sub-agents, GitHub Actions

EA4ALL (Enterprise Architecture for All)

- **Overview:** Agentic solution automating architecture workflows to democratise enterprise architecture knowledge for cross-functional teams, increase architecture efficiency and transparency.
- **Architecture:** Multi-agent system (Langgraph, CrewAI), Langsmith observability, MCP, RAG, Evaluations.

Runner Agentic Intelligence (RAI):

- **Overview:** Multi-agentic system that coaches runners by generating personalised training plans, insights, charts, and chat with your running data.
- **Architecture:** real-time evaluation and tracing engine for multi-agent workflows, providing complete visibility into LLM reasoning paths and execution metrics.

AI Platform, Data & Governance Expertise

- **Multi-Agent Orchestration Platforms:** Architected multi-agent platforms featuring structured reasoning, observability, dynamic routing, and evaluations.
- **Knowledge & Data Architecture:** Architected enterprise data integration patterns, knowledge retrieval systems (RAG), and event streaming networks across heterogeneous environments.
- **AI Controls & Risk Governance:** Enforced strict data privacy, access control, automated tool permissions, and auditing guardrails across enterprise AI workflows.

Professional Experience

WPP Media — Senior Director System Architect Agentic AI

2025 – 2026 / London, UK

- Guide product teams in designing the systems and structures needed to put AI at the core of existing products (Post Campaign Analysis “PCA” Automation - Google ADK, Media Buyer Agent - Google ADK and ProductionBoard Workflows Automation (n8n))
- Established automated prompt evaluation, reasoning observability, and guardrail enforcement protocols across core engineering teams.
- I led architecture work to align product teams and innovation initiatives with the existing WPP Open Agentic Framework enterprise agentic-AI platform., assess capability gaps, and

recommend architectural evolution, including requirements around agent coordination, observability, governance and state management.

BBC Studios — Lead Enterprise Architect

2021 – 2025 | London, UK

- Led Senior Solution Architects across cross-functional initiatives, setting architecture vision from strategy through execution.
- Partnered with Business, PMO and Business Analysts to translate strategy into business and technology blueprint roadmaps, assessing current state, outcomes and priorities.
- Led Architecture engagement with Innovation Hub from idea to use-cases execution.
- Established capability-based planning and increased SAP LeanIX adoption, enabling visibility of the technology landscape and more informed decisions.
- Developed the AI/GenAI Capability Model and Enterprise Architecture Generative AI Framework, creating a structured path from AI idea to production.
- Automated AI-use-case intake and synchronisation between business processes and the architecture repository, creating systematic visibility of emerging AI initiatives.
- Provided architecture leadership across transformation programmes, aligning technology decisions with business needs, standards and roadmaps.
- Presented at Gartner, LeanIX Insight and SAP transformation events.

British American Tobacco (BAT) — Global Enterprise Architect

2017 – 2021 | London, UK / Global

- Led Enterprise Architecture for Scientific Research & Development, governing technology architecture across a complex and highly regulated environment.
- Led the transformation of the Enterprise Architecture Governance and Compliance Framework, with a focus on enabling greater end-to-end agility.
- Developed integration architecture and enterprise automation foundations, including the Hybrid Integration Platform and UiPath RPA capability.
- Developed application remediation and architecture strategies supporting the global SAP programme across multiple Americas end-markets.
- Balanced enterprise standards, business priorities, cost, effort and roadmap considerations when making architecture and technology decisions.

British American Tobacco (and earlier career)

Dates	Organisation	Role	Summary
2019-2021	British American Tobacco (BAT) – London/UK	Enterprise Architect for Scientific Research & Development	Develop and own architecture artefacts for BAT's Scientific, Research & Development domain aligning with business needs and industry best practice. Keep up to date with industry best practice and peer organisations. Define and maintain the overall technology roadmap; ensuring it meets current and longer-term business requirements. Ensure the roadmap addresses transition from current state to future state, factoring in dependencies and requirements across various Digital related initiatives.
2017-2019		Global Solution Architect – Integration and Automation Platform	Develop integration solution architectures to projects linked with Business and IT Strategy. Leverage the Global Hybrid Integration Platform, Architecture Principles and Design to ensure ultimate business benefits and commercial value. Robot Process Automation platform (UiPath) design, build and architecture solution.
2011-2016	British American Tobacco (BAT) – Sao Paulo/Brazil	Regional Functional Solution Architect	Work with key initiatives within Americas Region to facilitate the landing and adoption of Enterprise Platforms
2007-2010		Global IT Build and Deploy Manager	Look after global SAP HR template rollout across BAT end-markets.
2005-2006		Contractor – IT Project Lead	Design and Build of the SAP HR Global template.
2000-2005		Contractor – IT Business Analyst	Engage with business stakeholders from Human-Resource, Finance, and IT Cross-Functional areas to drive new demands and opportunities.

1997-2000		Contractor – IT Web Developer (C++, Java, HTML, JavaScript, CSS)	End-to-end implementation of Human Resources Shared Centre Manager and Employee Self-Services Web-based tool.
1994-1996	Itau Bank – San Paulo/Brazil	Microsoft Developer and Team Coordinator	Front-office banking solutions development in Microsoft Solutions (Visual Basic, C, SQL)
1992-1993	Ford Electronics – Guarulhos/Bra zil	C Programmer	

Education & Professional Development

- MSc in Computer Science: Universidade de Mogi das Cruzes (São Paulo, Brazil)
- TOGAF 9 Certified: Enterprise Architecture Standard
- SAE Agilist: Scaled Agile Framework for Enterprise Delivery
- AI Certification: Beyond Evals: Designing Improvement Flywheels for AI Products (Maven), Building Agentic AI Applications with a Problem-First Approach (Maven)

Technical Skills

- **Enterprise Architecture & Governance:** TOGAF 9, SAE (Scaled Agile Framework), SAP LeanIX, Architecture-as-Code (CAS), Technology Portfolio Rationalisation, Target State Blueprints, Architecture Review Boards (ARB), Capability-driven Architecture
- **Enterprise AI & Agentic Platforms:** Agentic AI Systems Architecture, Multi-Agent Orchestration, Model Gateways, Vector Search (RAG), Observability & Tracing, AI Guardrails, LLM & Agentic Evaluation, Google ADK, Langchain, CrewAI, Bedrock, N8N,, SKILLS & Sub-Agents & Agents
- **Architecture-as-Code:** Spec-Driven Development, GitOps, Schema Linting, OpenAPI, AsyncAPI, Knowledge Architecture
- **Integration & Cloud:** Microservices, Event-Driven Architecture, REST/GraphQL APIs, FastAPI, Google, AWS, Azure, Data Architecture
- **AI Cloud & Ecosystems:** OpenAI, Anthropic, Open Source, Microsoft Azure AI, Google Cloud Vertex AI, AWS Bedrock, Microservices, REST / GraphQL APIs, Docker / Kubernetes.
